

Bandit Level 2 - Level 3

Log into level 2

```
ubuntu@ubuntu:~$ ssh bandit2@bandit.labs.overthewire.org -p 2220
```

This time the password is contained in a file name that contains spaces. There are several ways of achieving this. If we were to simply type in the filename with spaces, an error would occur.

1. Can use either " " or ' ' quotes in the filename, type in: *cat "spaces in this filename"*
2. Simply type in: *cat* (then press 's' which is the first letter of the file name, then
3. tab key). It will automatically add backslash before each space)

Response to either steps above is:

```
bandit2@bandit:~$ cat spaces\ in\ this\ filename  
MNk8KNH3Usiio41PRUEoDFPqfxLP1Smx
```

Remember to type in *exit* to close the connection for the next level
