

Bandit Level 8 - Level 9

The password again is stored in the file data.txt, but this time is the line that only occurs once.

If we were to cat the data.txt, my assumption is that it will contain multiple lines of possible passwords, but all except one line has been repeated / duplicated.

We can use the sort command, pipe it into the uniq flag to show a line that is unique in the file.

```
bandit8@bandit:~$ sort data.txt | uniq -u  
4CKMh1JI91bUIZZPXDqGanal4xvAg0JM
```
